Boston, MA 02203

CC: R. Morris

Dear Mr. Papadopoulos:

This letter will confirm our telephone conversation of May 1, 1990 regarding NPDES permit requirements for storm water discharges at the Acushnet Company, Rubber Division. We presently have an NPDES Permit # ~~MA 0003913~~ for cooling water discharges and roof drains which expire in 1992. We now question whether the Rubber Division of the Acushnet Company needs to obtain further NPDES permitting for storm water discharges other than those considered at the time of our permit application in 1987.

As we agreed in our conversation, the Rubber Division is currently in compliance with applicable requirements for NPDES permitting of storm water discharges associated with industrial activities. Unless permitting requirements change, the Acushnet Company will have no need for further permitting requirements prior to renewal in 1992.

I would appreciate your contacting me, if my understanding is incorrect or if permit requirements change before the time of our next renewal.

Thank you for your help and cooperation.

Sincerely,

ACUSHNET COMPANY

  
John J. Bailey, Jr., C.S.P.  
Director of Risk Management  
and Environmental Affairs
